Cirkus for admins

Members, flights, billing, expenses, the fleet, and the activity log — everything behind the Admin menu.

Cirkus for admins

Everything pilots can do, plus the **Admin** section: approving members, keeping the flight list clean, creating invoices, paying back expenses, and maintaining the lists the forms use. On a laptop it's the sidebar; on the phone it's under **More**.

1 Home: what needs your attention

The home screen shows a **Needs your attention** box whenever there is something to do: accounts waiting for approval, flying not yet invoiced, expenses to pay back. Each row is a link to the right page. No box means nothing is waiting.

2 Members

Accounts lists everyone. **Add member** creates an approved account straight away with a temporary password — tell the person and ask them to change it. Someone who registers themselves instead shows up under **Approvals**, where you approve or reject them. Use **Set password** on Accounts when someone has forgotten theirs; the role (pilot / admin) and status are edited there too.

3 Flights

There is no approval step: a flight goes from the pilot's log entry straight to invoicing. **Flights** is the full list, newest first, where you can **Edit** or **Delete** any flight that hasn't been invoiced — typically a pilot has asked you to fix a Tacho reading they can no longer change themselves. Editing someone else's flight keeps it as their flight. A **BILLED** flight is frozen; to change it, cancel its invoice first (below).

Flights: edit or delete anything unbilled.

4 Billing

Billing opens with **Ready to invoice**: one row per pilot with their unbilled flying, and under each row the individual flights — date, aircraft, route, Tacho or take-off/landing, hours, amount at today's member rate. This is your check before money is attached: look through the flights, fix anything odd under Flights, then **Create invoice** for one pilot or **Create all**.

Billing: an invoice Procountor refused (Send retries it) and one it has collected.

Each invoice covers everything the pilot has logged and not yet been billed for, at the member rate in force that day (VAT included — Procountor gets the net price and 25.5 % VAT per row, one row per flight), with 14-day terms. The flights on it become **BILLED**. Cirkus sends the invoice to **Procountor** at once: Procountor gives it its number and bank reference, emails it to the pilot and keeps the receivable. The row shows **SENT** with the Procountor number and reference; when the payment is booked in Procountor it turns **PAID** — Cirkus checks every hour, whenever you open Billing, or right now with **Sync with Procountor**. Past its due date an open invoice shows as *overdue*.

The pilot must be a customer in Procountor. Create them there first, then on **Accounts** open the pilot, **Find** by email and **Link** the match. An invoice for a pilot who isn't linked stays a **DRAFT** with the reason on the row; link the pilot and press **Send**. Nothing reaches the books under the wrong name.

ERROR means Procountor refused the invoice — the message is on the row (usually a customer without an email, or an account number Procountor doesn't know). Fix the cause and **Send** again. The flights stay billed meanwhile, so nothing gets invoiced twice.

Mistake on an invoice? A **DRAFT** or **ERROR** invoice — one that never reached Procountor — can be **Cancelled**: the flights go back to **SUBMITTED**, you or the pilot fix them, and you create the invoice again. An invoice that is already in Procountor is corrected there, with a credit note, by whoever does the books; Cirkus keeps showing it as it is.

5 Linking a pilot to Procountor

Once per pilot, before their first invoice. On **Accounts** the pilot's card has a **Procountor customer** field. Type their email (or name) in **Find in Procountor** and press **Find**; Cirkus lists the matching customers with their customer number. **Link** the right one — the id is saved and shown in the field. To unlink, clear the field and **Save**. Two pilots can't share one customer.

If nothing matches, the pilot doesn't exist in Procountor yet (or under a different email): create them there, then search again. Cirkus never creates customers itself.

Accounts: Find in Procountor, then Link.

6 Expenses

Pilots send receipts for things they've bought for the plane. **Expenses** shows what is waiting under **To pay back**, with the receipt photo, who bought what, and the amount split by category. Tap the photo to see it full size.

Pay the pilot by bank transfer, then enter the reference and **Mark paid**. If it isn't a club expense, type a reason and **Reject** — the pilot sees the reason and can fix and resend. Paid and rejected receipts move to the history below. A paid receipt is frozen; anything else the pilot (or you) can still edit or delete.

Expenses: the photo sits next to Mark paid and Reject.

7 Lists the forms use

Fleet: each aircraft's type, seats, member and guest hourly rates, co-owners, and how it is **billed**: *Tacho time* (tacho end – start) or *Airborne time* (take-off to landing, exact minutes). *Record Tacho readings* decides whether the log form asks for the meter — always on for Tacho billing, optional otherwise. Add a new aircraft at the bottom of the page. Changing a rate or the billing basis affects flights logged and invoices created from then on; every flight remembers the basis it was logged under. Pilots' logbooks show block hours regardless; invoices use the billing basis.

Flight types and **Expense categories** work the same way: an abbreviation, a Finnish name, the bookkeeping account, and an order. Edit in place and **Save**; **Deactivate** hides one from new entries without touching old ones; a type or category that's in use can't be deleted. The three expense categories (Öljy, Tarvikkeet, Muut) are waiting for their bookkeeping accounts.

8 Activity

Activity is the log: every sign-in and sign-out, every failed sign-in (marked in red, with the reason), and every change anyone makes — bookings, flights, invoices, receipts, accounts, fleet and lists — newest first, with the person, a one-line description and the IP address it came from (the browser is in a tooltip on the IP). The chips narrow it by kind, and you can filter by person and date. Nothing here can be edited or deleted; only admins see it. A run of failed sign-ins against one email is the thing to look for.

9 Status at a glance

THING	STATUSES	WHAT MOVES IT
Account	PENDING → APPROVED / REJECTED	Approvals, or Add member (approved directly)
Flight	SUBMITTED → BILLED	Creating an invoice; cancelling it goes back
Invoice	DRAFT → SENT → PAID ; ERROR if Procountor refused; draft/error → cancelled	Create invoice sends it; Procountor's payment (hourly sync) pays it; Send retries; Cancel only before Procountor
Expense	SUBMITTED → PAID / REJECTED	Mark paid / Reject; editing a rejected one resubmits it

Anything not yet billed or paid can be edited; anything billed or paid cannot. That one rule covers flights, bookings (until they've ended) and expenses.
